

## Leader in Identity-Preserved Non-GMO Corn and Soybeans

For over 40 years, Clarkson has been an industry pioneer in the production and supply of non-GMO and organic corn and soybeans. Clarkson's unique product focus and supply chain management begins with nurturing relationships with our farmer partners to produce consistent, high-quality specialty corns and soybeans. These row crops, and their derivatives, provide an array of ingredients needed to produce healthy, nutritious consumer food products.

### Our Non-GMO and Organic Food Ingredients

Food manufacturers have come to know Clarkson as a company that delivers high-quality, consistent organic and non-GMO specialty corns, soybeans and soy ingredients. Our expertise in grain-based applications helps our customers produce on-trend food products while maximizing profits.

### Our Grower Partners

Our commitment to partnering with our family of growers is a driving force in our mutual success. From seed to final harvest, Clarkson works hand-in-hand with our farmers to instill pride of ownership in their crops. Not every farmer passes the Clarkson test – only the most committed are chosen to join our team. But once the partnership is formed, farmers know they can rely on us to work with them to ensure a profitable path to market for their value-added crops.

## Identity-Preserved, Traceable to Their Fields of Origin

At Clarkson, we take identity preservation seriously, and have designed our business around its assurance. Our identity-preserved corns and soybeans are traceable to the American farms that grew them, and our storage and processing operations have been designed to assure that this identity is protected.

## Dedicated to Meeting Your Specific Requirements

Choose your options...

### Whole Grains
