

## Leader in Identity-Preserved Non-GMO Corn and Soybeans

For over 40 years, Clarkson has been an industry pioneer in the production and supply of non-GMO and organic corn and soybeans. Clarkson's unique product focus and supply chain management begins with nurturing relationships with our farmer partners to produce consistent, high-quality specialty corns and soybeans. These row crops and their derivatives provide an array of ingredients needed to produce healthy, nutritious consumer food products.

### Our Non-GMO and Organic Food Ingredients

Food manufacturers have come to know Clarkson as a company that delivers high-quality, consistent organic and non-GMO specialty corns, soybeans and soy ingredients. Our expertise in grain-based applications helps our customers produce on-trend food products while maximizing profits.

### Our Grower Partners

Our commitment to partnering with our family of growers is a driving force in our mutual success. From seed to harvest to final delivery, our farmers are proud of their crops, and the consumer products their crops ultimately create. Not every farmer meets Clarkson's standard – only the most committed with the appropriate infrastructure, experience and dedication to consumer health and wellness are chosen. With these farmers, we work together to ensure a profitable path to market for their selected crops.

## Identity-Preserved, Traceable to Their Fields of Origin

At Clarkson, we take identity preservation seriously and have designed our business around its assurance. Our identity-preserved corns and soybeans are traceable to the American farms that grew them. Our protocols, storage, conditioning plants and delivery systems are all dedicated to assuring this identity is preserved.

## Dedicated to Meeting Your Specific Requirements

Choose your options...

### Whole Grains

Indigo Blue Corn  
White Corn  
Yellow Corn
